<b>Customer Address</b>	Çayirova Campus, Tuzla, 34950 Istanbul, Turkey
<b>Contact</b>	Fatih Kasap
<b>Test Requested</b>	Assessment of effect of test device on bacterial and viral viability
<b>Sample Description</b>	UV-C Disinfection Unit BEKO UVT 5033 TA / 7730430201
<b>Number of Samples</b>	1
<b>Date of Receipt</b>	24 July 2020
<b>ASC Code</b>	ASC002433
<b>Report Number</b>	ASCR092435
<b>Report Date</b>	02 December 2020

## 1. Purpose

This report outlines the results of the study performed to assess the ability of the:

- UV-C Disinfection Unit (BEKO UVT 5033 TA)
  - UV-C supported disinfection program for 20 minutes at room temperature to remove bacteria and virus.

## 2. Test Item Description

The UV-C Disinfection Unit (BEKO UVT 5033 TA) was submitted to airmid healthgroup on 24<sup>th</sup> July 2020 (Figure 2.1).

**Figure 2.1.** UV-C Disinfection Unit

### 3. Materials

---

#### 3.1. *Staphylococcus aureus* subsp. *aureus* Rosenbach (ATCC® 6538™)

*S. aureus* is a Gram-positive, round-shaped bacterium that is a common member of the microbiota of the body, frequently found in the upper respiratory tract and on the skin.

#### 3.2. *Escherichia coli* (Migula) Castellani and Chalmers (ATCC® 8739™)

*E. coli* is a Gram-negative, facultative anaerobic, rod-shaped, coliform bacterium commonly found in the lower intestine of warm-blooded organisms.

#### 3.3. Human Coronavirus 229E (ATCC® VR-740™)

Coronaviruses were first discovered in the 1960's, causing upper respiratory tract infections in healthy individuals and serious disease in patients with comorbidities. Pathogenic human coronaviruses (HCoV) were subsequently identified, beginning with the discovery of SARS-CoV in 2002 and the recent detection of SARS-CoV-2. There are now seven identified human coronaviruses, those causing mild disease (229E, OC43, NL63, HKU1) and those causing severe respiratory illness (SARS-CoV, MERS, SARS-CoV-2). HCoV-229E was the chosen model for this project as it is a biosafety level 2 pathogen with similar genetic and protein composition to the SARS-CoV-2 virus.

## 6. Conclusion

---

The UV-C Disinfection Unit (BEKO UVT 5033 TA) UV-C supported disinfection program for 20 minutes at room temperature was demonstrated to be effective in reducing the tested bacteria and virus, achieving 99.98 % reduction against *S. aureus* and *E. coli*, and Human coronavirus 229E.HCoV-229E was the chosen model for this project as it is a biosafety level 2 pathogen with similar genetic and protein composition to the SARS-CoV-2 virus.

## 7. Additional Products

---

According to the Declaration of Conformity signed by Arçelik (dated 19.11.20) the products listed below conform in all aspects relating to performance in testing parameters to the UV-C Disinfection Unit (BEKO UVT 5033 TA / 7730430201)

- Beko / 7730430201 / UVT 5033 TA
- Arçelik / 7730420101 / UVT 6033 TA
- Beko / 7730430202 / UVT 5033 TA
- Voltas Beko / 7730430203 / UVT 5033 TA
- Beko / 7730430204 / UVT 5033 TA
