360° Rotating Base

360°, ergonomic kettle pick-up

The 360° Rotating Base lets you pick your kettle up and set it down without contorting your wrist at all – just in whatever way's most comfortable for you!

Dry-boil Protection

Automatic shut-off if all water boils off

Boil-dry Protection is a precautionary function that turns the kettle off automatically when the appliance runs out of water. It prevents accidents and any damage that might happen to the kettle.

Auto Shut-off

Automatic switch-off once water boils

You don't need to watch your kettle come to a boil any more thanks to the Auto Shut-off function that stops the appliance once the water comes to a boil.

AntiSlip Feet

Firm & stable hold

Anti-slip Feet will secure your kettle, making it stand strong and stable on the countertop. The appliance will not budge, no matter how intense boiling or your handling is.
